Survey Inspection of Containers

Containers are a safe and effective means of cargo transportation. Container should be able to stand transportation by sea, railway, etc. Structural integrity of a container is utmost important in ensuring door to door delivery of goods

SingClass has sufficient experience both in pre-loading survey inspection of empty containers, which purpose is to estimate their condition and to determine their readiness to the reception of cargo, and in inspection of damaged during cargo transportation containers. Survey inspection of containers is carried out by qualified and competent surveyors. We also provide designing of cargo plans, recommendations and draws of the stowage and fastening of various cargoes in a container.
